-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 8-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 8, and 14 recite the limitation "the IP address" in line 3. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 8-17 are rejected under 35 U.S.C. 102(e) as being anticipated by Millet et al U.S. Patent Number 6,434,627.

Re Claims 8, 14, 17, fig. 7 teaches a translator 712 for storing an IP address of the 752 (a target node); 712 sets the source IP address 715 with the inside MAC address of interface (the second port), wherein the source IP address is the IP address

of 752; setting the source IP address of the 752 with Destination IP (an IP address) with a Destination MAC address of interface (first port) (See col. 12, lines 65 +).

Re Claim 9, refer to Claim 8, wherein the translator 712 intercepts the data stream based on the packet information and performs translation to be transmitted to the destination node 704.

Re Claims 10, 11, refer to Claim 8, wherein the translated packet (a newly made data stream) is transmitted.

Re Claim 12, refer to Claim 8, wherein the ARP request is transmitted for setting up MAC address for the port (See fig. 5).

Re Claim 13, refer to Claim 12, wherein the ARP table is updated to activated and deactivate ports.

Re Claim 15, refer to Claim 14, wherein the IP address of the 752 (target node) is not changed, hence no reset of an address is not required.

Re Claim 16, refer to Claim 14, no mention of loop back process.

Allowable Subject Matter

5. Claims 1-7 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

As recited in Claim 1, prior art fails to teach a gateway including a router to set a transmission route and transmit data to the IP address of the target node without a loop back process, in response to the IP address of the target node and the IP address of the first port being the same.
